Art Unit: 2627

In response to applicant's filing dated May 20, 2004. The following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Hoshino et al (5438582).

The reference shows a laser output monitoring apparatus in an optical disk recording device comprising: a light source LD, a write strategy generating signal (modulated write signal) column 5 lines 51-64, detecting and correcting an overshoot and undershoot of the laser output column 7 lines 50-65 by monitoring the laser source.

With respect to the limitations of claims 2 and 10 see column 9 line 59 to column 10 line 21.

Claims 3-8, 11 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the cited prior art shows the use of a correction signal generating unit having the process or the elements as claimed.

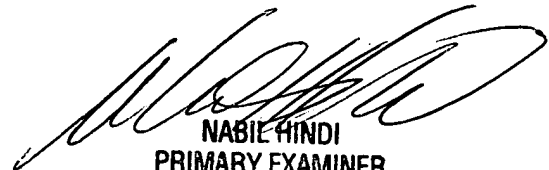

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 5483512.
